

SMART PARKING

The innovative solution designed to revolutionize parking

THE PROBLEM

In Thrissur District, like many urban areas, parking congestion causes frustration and delays for drivers. Without access to information on available parking spots, resources are inefficiently utilized, exacerbating traffic congestion.

OUR SOLUTION

Smart parking offers real-time availability updates within a 200-300 meter radius, location-based search functionality, nearby parking location identification, and fee details, all complemented by a user rating system for informed decision-making and community feedback.

TIMELINE

Idea finalization

Abstract submission

Literature Survey begins

Design survey, pain point identification

SRS Document submission

App development begins
